AQA/SDET with over 5 years of experience in the tech industry. I implement new technologies to automate product quality assurance.

- Development of AI solutions for test automation
- Implementation of backend services for testing teams
- Work in the following domains: Fintech, HFT, Edtech
- Implementation of technical practices and approaches to improve product quality
- Quality assurance for Backend, Mobile, and Web

SKILLS

Java, Kotlin, Python, JavaScript, TypeScript, gRPC, Websocket, FIX, RestAPI/HTTP, Maven/Gradle, JUnit/TestNG, Apache Kafka, RabbitMQ, Postman, Jira, Agile, Scrum, KANBAN, Confluence, Git, SQL, PostgreSQL, MySQL, ClickHouse, CI/CD, Gatling, Docker.

PROFESSIONAL EXPERIENCE

July 2023 » October 2025

T-BANK (50 MLN CLIENTS)

Senior QA Backend Engineer/QA Tech Leader

About the position: Development and implementation of all testing processes within a product consisting of 6 microservices handling financial calculations. Concurrently, I held the position of QA profession leader, where my responsibilities extended to technical practices across the entire company's QA team.

Responsibilities:

- Development and implementation of functional and non-functional test scenarios
- Implementation and expansion of load testing to product teams
- Implementation of product processes and technical practices within the development department
- Development of an automated QA AI service/Development of a QA Backend service
- Release approval

Results:

- Developed a QA AI service focused on writing test case scenarios, which reduced testing time from 1 week or more
- Implemented API coverage from zero to 98%, which resulted in a reduction in production errors and a 12-fold reduction in the company's regulatory fine costs
- Implemented load testing, which enabled the timely detection of over 500-times increases in request execution time and prevented SLA misses
- Automated smoke test launches based on triggers in development repositories, reducing the development team's dependence on the testing team
- Expanded the practice of load testing within the department, enabling us to understand during the development phase whether the product is capable of meeting non-functional requirements and fixing issues before production
- Implemented the 3 Amigo product practice, which reduced the number of acceptance bugs by a factor of 4

Stack: Java, Kotlin, Kafka, gRPC, WebSocket, FIX, REST API, Grafana, PostgreSQL, LLM (model gemma-3-27b), GitLab CI/CD, Jenkins, Docker.

October 2022 » July 2023

WEDEVX.CO

QA/AQA Engineer

About the position: Launching all testing processes from scratch (manual and automated) within an edtech product, specifically an asynchronous educational platform. QA team: 3 people.

Responsibilities:

- Developing and implementing functional test scenarios (UI, API)
- Creating a testing framework from scratch (Kotlin/Java)
- Integrating testing processes into development stages
- Approving releases

Results:

- Building testing processes from scratch, improving the quality of the entire product and user satisfaction
- Implementing API coverage with automated tests from zero to 100%, reducing testing time by tens of times compared to manual testing
- Developing WEB UI automated tests for mobile devices, tablets, and personal computers, which also reduced testing time by tens of times compared to manual testing
- Led the onboarding and training of two QA trainees, resulting in each QA being promoted to junior level

Stack: Kotlin, Java, WebSocket, REST API, Grafana, PostgreSQL, MongoDB, Jenkins, Docker.

November 2020 » October 2022

DISCOVERY STUDIO

Fullstack Quality Assurance

Position: Testing (manual and automated) of a mobile banking app.

Responsibilities:

- Conducting regression testing of chat support and notifications
- Writing automated tests (JavaScript, TypeScript)
- Assigning element identifiers to Android (Kotlin) and iOS (Swift) repositories

Results:

- Successfully maintained the quality of changes to iOS and Android mobile app products within the "chat support" and "notifications" sections

Stack: Kotlin, Swift, JavaScript, TypeScript, WebSocket, REST API, ClickHouse.

PROJECT ACTIVITIES

November 2024 » March 2025

BHFT

SDET

Position Description: Development and deployment of QA backend services, ensuring the quality of the platform for high-frequency trading (HFT) in cryptocurrencies and traditional finance..

Results:

- Developed a proxy service to intercept incoming and outgoing messages via FIX, gRPC, WebSocket, and HTTP protocols from the trading platform to trading exchanges. The service can modify requests/responses, simulate delays and channel blocking, and simultaneously work with multiple exchanges
- Implemented a service for creating a queue for automated tests to interact with specific exchanges to avoid cross-trading
- Developed and stabilized automated tests for market data gateways, execution gateways, and trading robots

Stack: Kotlin, Java, Python, REST API, gRPC, WebSocket, FIX, Gradle, Docker, Jenkins, JUnit5, ClickHouse, PostgreSQL, Ktor.

EDUCATION

BACHELOR OF TECHNOLOGY, FAR EASTERN STATE TRANSPORT UNIVERSITY

| Specialization -Software Engineer

LANGUAGES

Russian – Fluent
English – B2 (Speaking)
